- Srinayana Mandalapu
- Anushka Shankar

Introduction

- A user-centric web application for productivity.
- Addresses procrastination, lack of focus, and planning issues.

Objectives

- To enhance our learning.
- To explore various technologies via the process.
- To gain insights into how such features work.
- To implement our learnings and knowledge into our web-app.
- To deploy it and provide a solution to the raised issue.

Approach

- Collaborative Work: Divided tasks evenly among team members.
- User-Centric Design: Prioritize understanding user needs and preferences.
- Frontend-First: Focus on frontend development initially.
- Backend Development: Implement core functionalities and data storage.
- Iterative Development: Continuously refine and enhance based on feedback.

Tech Stack

Challenges and Learnings

Challenges

1. Finding it hard to implement what we learnt and taking excess time to figure stuff out.
2. Lacking in time management.
3. Implementation of ideas was harder than imagined.

Learnings

1. Team and project management.
2. Making a website using frontend UI and UX.
3. Breaking things down into smaller parts makes implementation easy.

Future Scope

- Complete the UI/UX according to the theme decided, improve responsiveness and animation.
- Build the remaining features.
- Finalise the logo.
- Learn and understand backend and API functioning.
- Work on deployment.
- Conduct user testing and gather feedback for further improvements.

Hence, Let's ACHIEVO

Domain: Web Development
Status: Ideation

Thank You !
